

PROJECT OVERVIEW

Greenwood Village Public Works

ELEVATION: GREENWOOD VILLAGE PUBLIC WORKS / D2C ARCHITECTS

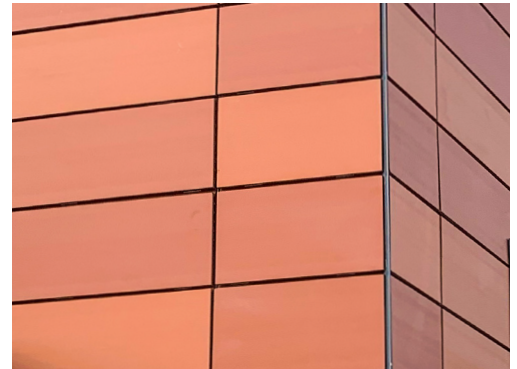

An environmentally-friendly terracotta rainscreen updates a Denver public works building

D2C Architects provided planning and design services for the updated City of Greenwood Village Public Works and Parks project. Terra5 terracotta rainscreen panels were selected in a blend of three reds and a rich brown tile. Given the varying temperatures in the Denver suburbs, Greenwood Village wanted a long-lasting, environmentally-friendly façade material. Terra5 was selected to meet all the building's aesthetic needs and wall performance needs. The use of ECO Cladding's Vci.45a concealed system for double-skinned tiles accommodated engineering and thermal demands.

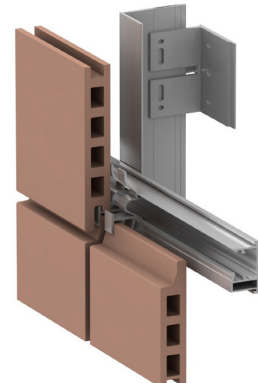

- **SYSTEM:** Vci.45a Concealed System
- **MATERIAL:** Terra5 TC24 Rainscreen Panels
- **ARCHITECT:** D2C Architects
