

PROJECT OVERVIEW

# KINSALE INSURANCE HEADQUARTERS

ELEVATION: KINSALE INSURANCE HEADQUARTERS - RICHMOND, VA / BASKERVILL ARCHITECTURE

## Outside-In Design for Corporate Campus

Designed by Baskervill's Architecture and Interior Design teams, the new Kinsale Insurance Headquarters will present as an attractive and practical building with every square foot designed with the people who work from within in mind. Frames of alternating brick and ACM metal paneling define the ground-up, five-story building—and the enlarged glass acts as a transparent connective tissue throughout the design.

ECO Cladding's Vci.11 aluminum subframing system was selected to support the facade's grey ACM panels. The rainscreen attachment system has 1.5" adjustability and has the ability to meet the building's thermal requirements.

- **SYSTEM:** ALPHA VCI.11 - Subframing System
- **MATERIAL:** ACM CLADDING
- **ARCHITECT:** Baskervill Architecture
