

PROJECT OVERVIEW

TOMPKINS FINANCIAL

ELEVATION: TOMPKINS FINANCIAL HEADQUARTERS / HOLT ARCHITECTS

Modern Rainscreen Rooted in Tradition

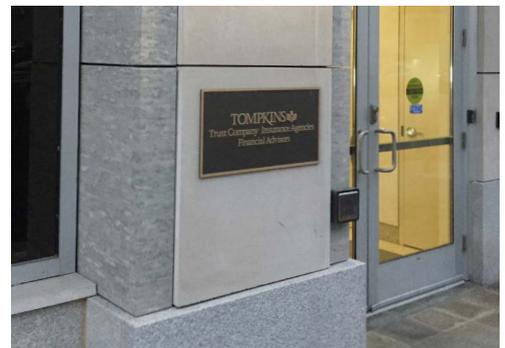

Tompkins Financial's 7-story headquarters in the heart of Ithaca was designed by HOLT Architects. The 110,000sf office building brings 300 employees from multiple locations together under one roof. The design team sought to blend the traditional aesthetic of historic bank buildings with the modern structures of Ithaca's downtown.

ECO Cladding's concealed Vci.41 aluminum subframing was used for the main elevation's natural stone facade. The engineered ECO Cladding System was designed to handle the weight of the large stone slabs while providing the installation crew over 1.5" of on-site adjustability in order to accommodate both substrate tolerances and also integrate seamlessly with the traditional brick masonry facade and glazing.

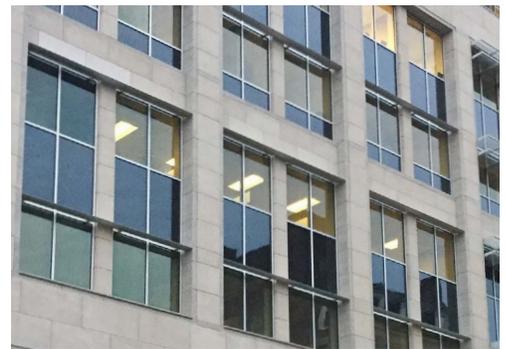

- **SYSTEM:** ALPHA VCI.41 - Concealed Anchor
- **MATERIAL:** NATURAL STONE PANEL
- **ARCHITECT:** HOLT ARCHITECTS
