

PROJECT OVERVIEW

WESTON POLICE STATION

ELEVATION: WESTON POLICE STATION - WESTON, MA / DOWNHAM & SWEENEY

A Welcoming, Community-Oriented Design

Donham & Sweeney was selected by the town of Weston to design the new 20,000 square foot police station to address the deficiencies of its predecessor, supporting the department’s “community-oriented agency” philosophy. A larger, more welcoming, and accessible lobby links visitors directly to dispatch, the 40-seat, networked training/ presentation room, and a small, private family conference room. Police work is conducted in a series of well-equipped offices, interview rooms, and the booking and detention area is secure and contained. The station was designed as part of a new municipal campus.

ECO Cladding’s Vci.11 aluminum subframing system was utilized to install the facade’s blue ACM panels. The rainscreen attachment system has 1.5” adjustability and has the ability to meet the building’s thermal requirements.

- **SYSTEM:** ALPHA VCI.11 - Subframing System
- **MATERIAL:** ACM CLADDING
- **ARCHITECT:** Downham & Sweeney
